TERENCE LIN

Millbrae, CA | +1 (415) 629-1641 | linterence4@gmail.com | LinkedIn | github.com/tlin41390 | Portfolio

EDUCATION

Santa Clara University **January 2025 – June 2027 (Expected)**
M.S., Information Systems

University of San Francisco **August 2019 – May 2023**
B.S., Computer Science

SKILLS

Languages: Java, Python, TypeScript, JavaScript, C, SQL, Dart, HTML/CSS
Backend & Frameworks: Spring Boot, FastAPI, Flask, Node.js, Express.js, REST APIs, React.js, Next.js, Flutter
Cloud & DevOps: AWS, Microsoft Azure, Docker, Docker Compose, GitHub Actions (CI/CD), Linux/Unix, Git, Apify
Databases: PostgreSQL, Supabase, MySQL, MongoDB, Pinecone
AI & Automation: OpenAI API, Claude API, RAG, AI Governance, Selenium, Codex, Claude Code

PROFESSIONAL EXPERIENCE

Bridging Tech Ed **August 2024 – June 2026**
Backend Engineer *San Francisco, CA*
Supabase, SQL, GitHub Actions, Microsoft Azure, React, TypeScript

- Configured the Supabase database and integrated it with the React web app on a 5-person team, supporting the platform's migration from Microsoft Azure to Supabase
- Implemented user sign-up and login with Supabase Auth, securing student accounts for a classroom pilot with 12 students
- Built a GitHub Actions CI/CD pipeline from scratch that automatically deploys the frontend and backend services to production, replacing manual deployment steps on every release
- Set up routing for 6 pages with React Router and state management, keeping user data consistent as learners moved through the platform

University of San Francisco **January 2022 – May 2023**
Computer Science Tutor *San Francisco, CA*

- Held 10 hours of office hours per week across 4 semesters (~600 hours total), supporting about 15 students weekly with C, HTML/CSS, and Linux over Zoom and in campus labs
- Helped students debug their code and write cleaner, more efficient solutions for a software development course; several students credited the sessions with helping them pass

PROJECTS

Airline Miles Automation | *Python, Selenium, Supabase, Apify*

- Built an automated scraping and data ingestion pipeline in Python and Selenium that collects mileage and rate data from 4 loyalty programs, covering 41 types of miles and points
- Scheduled near-daily runs on Apify and stored results in Supabase, replacing repetitive manual cross-referencing with a run that finishes in minutes

AnyLeetCode Problem | *Python, FastAPI, OpenAI API*

- Built a FastAPI backend that generates LeetCode solutions in 20+ programming languages for technical interview preparation
- Integrated the OpenAI API (GPT-5) to return optimized solutions with step-by-step explanations, time/space complexity analysis, and the underlying algorithm pattern
- Used Codex as an AI coding agent to speed up development, reviewing and testing the generated code

NBA Shot Chart Player Analysis | *Spring Boot, Python/Flask, Docker Compose, Claude API, HTML5 Canvas*

- Built a full-stack analytics app that plots every shot a player has taken in any season across 30+ seasons (1996–97 to present) on an interactive court chart that renders almost instantly
- Designed a two-service architecture (Spring Boot + Python/Flask microservice), containerized and orchestrated with Docker Compose and health checks
- Integrated a Claude API chatbot that uses tool calling to answer natural-language questions with live NBA player and shot data
